COMPARATIVE ANALYSIS

Team Names

Angel Caldera, Matilde Crisp, Lilly Edmonson, Makenzie McGilvray

Instructor

Irem Sezer

This project investigates how architectural precedents can be abstracted into organizational systems rather than formal replicas. Through comparative analysis of built and unbuilt works, the project explores centralized and linear planning, modular grids, and the relationship between solid and void. These strategies are synthesized into a cohesive architectural object that prioritizes spatial hierarchy, circulation, and experiential progression within an urban context.

01 // Urban Context

02 // Organization System

This project began with an in-depth precedent analysis of Bramante's St. Peter's Basilica, focusing on its centralized plan, spatial hierarchy, and relationship between solid mass and void. We studied how the dominant central void, supported by a rigid grid system, organizes circulation and establishes hierarchy. Following this initial study, we expanded our analysis to include multiple precedents across varying urban and architectural contexts. By comparing organizational systems, geometry, and figure-ground relationships, we identified recurring strategies such as modular grids, linear procession, and the interplay of circular and rectilinear forms. Diagramming these elements allowed us to extract transferable concepts rather than literal forms, emphasizing how each precedent negotiates hierarchy, movement, and spatial experience.

CENTRAL VOID

SPATIAL HIEARCHY

PROGRESSIVE MOVEMENT

The extracted strategies were synthesized into a unified architectural logic through a series of abstracted diagrams and iterative massing studies. A base grid serves as the organizing framework, supporting modular components that reinforce processional movement and spatial hierarchy. Central voids act as anchoring elements, while linear arms extend outward to guide circulation and establish rhythm. The final architectural object translates this logic into a resolved massing, balancing repetition and hierarchy through modular volumes that progressively increase in height toward a dominant central void. Courtyards, openings, and shifts in elevation create layered relationships between interior and exterior, situating the building within an urban context and emphasizing movement, sequence, and experiential depth.

TRINITY BATH HOUSE

Team Names

Ivy Clyne, Matilde Crisp, Ryann Dauherty, Josie Six

Instructor

Irem sezer

The Trinity Bath House is a site-driven proposal embedded within the Trinity River levee in Dallas, responding to shifting water levels, erosion, and soft marsh terrain. Rather than sitting atop the landscape, the building is carved into the levee, treating earth, hydrology, and section as primary architectural materials. The design evolved from curvilinear massing studies into a pill-shaped geometric language that organizes pools, circulation, and openings, informed by bathhouse precedents emphasizing light, section, and environmental continuity. Structured by a structural grid, a linear axis, and the pill-form system, the project choreographs public-to-private sequences and vertical bathing experiences, culminating in a spatially layered architecture shaped by site, section, and atmosphere.

07 // User Experience

Apsoidal shapes were used as the primary geometric language, guiding the organization of pools, circulation paths, and carved volumes throughout the project. These curved forms emphasize how the bath house is embedded into the landscape, highlighting the contrast between solid earth and open voids. The model reveals the layered spatial sequence, from more enclosed bathing areas to open terraces, and helped clarify scale, depth, and the overall spatial experience as the design developed.

PRECEDENT ANALYSIS - EAMES HOUSE

Instructor
Benjamin Baaske

The Eames House, also known as Case Study House No. 8, was designed by Charles and Ray Eames in 1949 as part of the Arts and Architecture Case Study Program to explore efficient modern living through prefabrication and minimal materials. The design is composed of two simple rectangular volumes, one for living and one for working, placed on a gently sloping site in the Pacific Palisades and closely integrated with the surrounding landscape. Influences from Japanese architecture are reflected in the use of natural light, wood surfaces, and open interior spaces, while steel and glass create a modular and industrial exterior. The courtyard connection, flexible plan, and relationship to nature demonstrate how simple materials and thoughtful design can produce adaptable, functional, and enduring modern architecture shaped by site, section, and atmosphere.

THE RIVERWALK

Instructor
Benjamin Baaske

This project proposes a contemporary one bedroom apartment along the San Antonio River Walk, developed as a continuation of design principles explored throughout the semester and building on earlier ARCH 105 studies. The design investigates defined and implied space, hierarchy, site conditions, and the transition from two to three dimensions, using spatial sequencing to balance privacy and openness. Public and private zones are layered along a loose central spine that opens toward the river, reinforcing flow, accessibility, and a strong visual connection to the site. site, section, and atmosphere.

Massing Development

The apartment is organized around a central circulation spine that structures movement and connects the main living spaces. Large glass openings bring natural light deep into the interior while strengthening the visual connection to the River Walk. Private areas are positioned toward the more enclosed portions of the plan to create a sense of retreat, while shared living spaces are placed along the river-facing edge to emphasize openness and views. This layout establishes a clear gradient between public and private zones, enhancing both spatial flow and everyday functionality.

COLLECTIVE WORKS

MISC. // 2024-2026

A curated collection of selected works that, while varied in scope and scale, demonstrate an ongoing exploration of architectural thinking, representation, and spatial investigation. This compilation brings together studies in precedent analysis, site-driven design, structural systems, and formal development, highlighting the use of drawing, modeling, and iterative processes as tools for design discovery. Each project reflects a different stage of learning and experimentation, collectively illustrating a growing understanding of space, material logic, and architectural composition.

05

This study explored grid systems and color as tools for defining spatial relationships, rhythm, and hierarchy. Early compositions began with a Fibonacci-based grid before shifting to orthogonal and irregular grids that more clearly articulated three distinct spaces and their connections. The final composition emphasized squared and rectangular voids, layered slot conditions, and a balance between continuous and terminated openings to guide spatial flow. Multiple color iterations were then developed using complementary, tetradic, split-complementary, and analogous schemes to test contrast and hierarchy. The final selection used an analogous blue palette, where shifts in tone distinguished primary, secondary, and tertiary spaces while reinforcing depth, layering, and visual cohesion.

FRAMING DOMESTIC VIEWS

This project explores the transformation of a domestic interior through an architectural intervention that responds to both aesthetic and functional needs. Working within an existing living space, the design focuses on identifying a specific moment within the home and reimagining it through careful documentation, spatial analysis, and a considered point of view. The proposal investigates how interior space can be framed, altered, and enhanced by studying material character, dimensions, lighting, and the lived qualities of the room, ultimately translating these observations into a refined architectural intervention.

This project developed from a close reading of site context through color composition studies and the integration of an inhabitable cube, resulting in an observatory landmark designed to connect earth and sky. The structure is positioned within an open site to encourage movement, interaction, and exploration, using bridges to link the observatory to surrounding rooftop spaces and create a network of visual and physical connections. The spatial organization includes open, semi-open, and enclosed areas that guide a progression of experiences, from the expansive primary observation deck to more intimate tertiary spaces and contemplative secondary zones. Interstitial spaces beneath the bridges create moments of pause, reinforcing the project's focus on reflection, discovery, and a strong relationship between architecture, landscape, and community.

An early iteration of the project that focuses on establishing the structural “bones” of the design before the addition of surfaces, finishes, or detailed articulation. The initial exploration emphasized curved forms and primary structural moves, using them to define the overall framework and spatial direction of the building. At this stage, the model operates as a work in progress, testing relationships between primary and secondary structural elements and how they begin to organize units, circulation, and hierarchy. Rather than resolving the final form, this phase concentrates on building a clear structural language and foundational system that will guide future refinement, consistent with the project’s focus on developing the skeleton and structural logic before enclosure.

EDUCATION

TEXAS A&M UNIVERSITY (TAMU) COLLEGE STATION, TX
BACHELOR OF SCIENCE IN ARCHITECTURE, HONORS PROGRAM

- MAJOR GPA: 4.0 CUMULATIVE GPA: 3.8
- FUNDED 100% THROUGH EMPLOYMENT, GRANTS, AND ACADEMIC SCHOLARSHIPS

EXPECTED MAY 2028

TECHNICAL & PROFESSIONAL SKILLS

DESIGN SOFTWARE: AUTOCAD, RHINO, SKETCHUP, ADOBE PHOTOSHOP, ILLUSTRATOR, INDESIGN
ARCHITECTURE SKILLS: 3D MODELING, BIM, HAND DRAFTING, SKETCHING, CONSTRUCTION KNOWLEDGE
LANGUAGES: ENGLISH (NATIVE), ITALIAN (NATIVE), LATIN (PROFESSIONAL), SPANISH (LIMITED), FRENCH (LIMITED)

WORK EXPERIENCE

SERVER

THE STELLA HOTEL

- DELIVERED HIGH-QUALITY SERVICE TO 100+ GUESTS PER SHIFT IN A FAST-PACED FINE DINING ENVIRONMENT
- MAINTAINED EFFICIENT DINING OPERATIONS DURING PEAK HOURS THROUGH TABLE AND SERVICE COORDINATION
- IMPROVED ONBOARDING EFFICIENCY BY ASSISTING IN TRAINING NEW SERVERS ON SERVICE STANDARDS
- HANDLED CASH AND CHECK TRANSACTIONS WITH CONSISTENT ACCURACY AND ACCOUNTABILITY

AUG. 2025 – PRESENT

SERVER

CASA MANGIARE LLC

- BALANCED 20–24 WORK HOURS WEEKLY ALONGSIDE A FULL ACADEMIC COURSE LOAD
- SUPPORTED A SUCCESSFUL RESTAURANT LAUNCH AS A MEMBER OF THE OPENING SERVICE TEAM
- INCREASED SERVICE EFFICIENCY BY MULTITASKING ACROSS TABLES, ORDERS, AND PAYMENTS

APR. 2023 – FEB. 2025

LEADERSHIP & INVOLVEMENT

MEMBER

2024-PRESENT

AIAS — AMERICAN INSTITUTE OF ARCHITECTURE STUDENTS TEXAS A&M UNIVERSITY

- LEARNED INDUSTRY WORKFLOWS BY ATTENDING LECTURES LED BY PRACTICING ARCHITECTS AND ARCHITECTURE FACULTY
- DEVELOPED PORTFOLIO AND GRAPHIC COMMUNICATION SKILLS THROUGH HANDS-ON AIAS DESIGN AND PRESENTATION WORKSHOPS
- APPLIED PROFESSIONAL FEEDBACK FROM ARCHITECTS AND PROFESSORS TO REFINE DESIGN THINKING AND VISUAL REPRESENTATION

2020-2023

LIAISON, STUDY ABROAD PROGRAMS

TEXAS A&M UNIVERSITY / SANTA CHIARA STUDY CENTER ITALY

- COORDINATED ACADEMIC AND CULTURAL LOGISTICS BETWEEN U.S. UNIVERSITIES AND ITALIAN INSTITUTIONS
- SUPPORTED SEMESTER-LONG STUDY ABROAD PROGRAMS THROUGH SCHEDULING AND ON-SITE ASSISTANCE
- ORGANIZED MULTI-CITY ARCHITECTURAL AND CULTURAL TOURS FOR INTERNATIONAL STUDENT GROUPS

2020-2022

LIAISON, RESIDENTIAL PROGRAMS

VIRGINIA MILITARY INSTITUTE / RESIDENCE LE SANTUCCE ITALY

- ASSISTED EXECUTION OF INTERNATIONAL ACADEMIC PROGRAMS THROUGH PLANNING AND COORDINATION
- ORGANIZED CULTURAL AND CULINARY EVENTS PROMOTING REGIONAL TUSCAN TRADITIONS
- MANAGED STUDENT DINING LOGISTICS FOR RESIDENTIAL STUDY ABROAD COHORTS

VOLUNTEER EXPERIENCE

MEMBER

RYLLIES WOMEN'S ORGANIZATION TEXAS A&M UNIVERSITY

FEB. 2025 – PRESENT

- SUPPORTED EARLY LITERACY INITIATIVES THROUGH THE READ BY THIRD PROGRAM IN LOCAL ISDS
- ASSISTED PLANNING AND OUTREACH FOR COMMUNITY EVENTS INCLUDING FALL FEST AT WOLF PEN CREEK
